a
control (reservoir decoupled):
heating destroys order
entropic model:
heating creates order
order parameter $\langle|\Sigma_x \phi_x|\rangle / V$
temperature T
b
heating scan
cooling scan
reservoir fluctuations
$\langle\chi^2\rangle_{\text{entropic}} / \langle\chi^2\rangle_{\text{control}}$
temperature T
c
entropic model, $T = 0.6$: disordered
entropic model, $T = 5$: ordered
lattice slice $z = 0$
phase $\arg(\phi_1 + i\phi_2)$
π
0
$-\pi$
